

Del D:

O1)
$$\frac{1}{5} = (n-1) \left(\frac{1}{n}, -\frac{1}{n}\right)$$
 Vi har bikonveks lince dis $2 \cdot (n-1) \left(\frac{2}{7} \cdot R\right) = 7 \cdot \frac{R}{2(n-1)}$

For each light $n_1 = 1, 51$

For left $n_2 = n_2 = 1, 51$

For left $n_3 = n_4 = 1, 53$
 $\frac{1}{5} = \frac{10 \cdot cm}{2(0,5)} = \frac{9}{4} \cdot 80 \cdot cm$

For left $n_3 = n_4 = 1, 53$
 $\frac{1}{5} = \frac{10 \cdot cm}{2(0,5)} = \frac{9}{4} \cdot 30 \cdot cm$

For left $n_3 = n_4 = 1, 53$
 $n_4 = n_4 = 1, 53$

Kamerasenster må light evidden.

O2) $\frac{1}{5} + \frac{1}{5} = \frac{1}{5} = \frac{9}{5} \cdot \frac{1}{5} = \frac{1}{5} = \frac{1}{5} \cdot \frac{1}{5} = \frac{1}{5} = \frac{1}{5} \cdot \frac{1}{5} = \frac{1}{$
